PROFESSIONAL SUMMARY

Data-driven Computer Science graduate with 6 months of Business Analyst internship experience delivering end-to-end analytics solutions using SQL, Python, Power BI, and Tableau. Proven ability to clean and transform large datasets, build stakeholder-facing dashboards, and surface actionable business insights. Seeking an Analyst role to drive data-backed decision-making and operational efficiency.

TECHNICAL SKILLS

Languages:	Python, SQL, MySQL
Analytics & BI:	Power BI, Tableau, Advanced Excel (Pivot Tables, Power Query, DAX, Slicers, Charts)
Data Skills:	Exploratory Data Analysis (EDA), Data Cleaning & Preprocessing, KPI Reporting, Business Statistics
Tools & Methods:	Git, Agile Methodology, MS Excel, PowerPoint, Word

WORK EXPERIENCE

Business Analyst Intern — AI Variant

Jul 2025 – Jan 2026

- Collected, cleaned, and preprocessed 50K+ rows of operational data using Python (Pandas) and MySQL, reducing data inconsistencies by ~30% and improving downstream reporting accuracy.
- Built 5+ interactive Power BI and Tableau dashboards tracking KPIs across sales, operations, and customer metrics — enabling weekly stakeholder reviews and cutting manual reporting time by 40%.
- Executed complex MySQL queries (joins, aggregations, subqueries) for EDA across relational databases, surfacing trends that informed 3 product and process improvement decisions.
- Designed Advanced Excel reports using Pivot Tables, Power Query, and dynamic charts, consolidating multi-source data into executive-ready presentations delivered to senior management.

PROJECTS

Federated Learning & Explainable AI — Fraud Detection System

Python, Scikit-learn, Pandas, Streamlit, XGBoost, DNN, RNN, Federated Learning, SHAP (XAI)

- Architected a privacy-preserving fraud detection system using Federated Learning to train ML models across distributed datasets without sharing raw data, achieving 94%+ classification accuracy on test set.
- Benchmarked 5 ML models (Random Forest, XGBoost, DNN, RNN) using Scikit-learn; applied SHAP-based XAI to generate interpretable feature-importance reports, improving model transparency for stakeholders.
- Deployed an interactive Streamlit dashboard for real-time fraud prediction and visual model explanation, reducing simulated manual fraud review effort by ~50%.

Adventure Works Sales Analysis

Power BI, Tableau, Advanced Excel, MySQL, DAX

- Analyzed 3 years of transactional sales data using MySQL (CTEs, window functions) and DAX measures to surface revenue trends, regional performance gaps, and profitability drivers.
- Built dual Power BI and Tableau dashboards with drill-through KPIs; identified top 3 underperforming product categories contributing to a 15% revenue gap vs. targets, enabling targeted corrective action.

High Cloud Airlines Operational Analysis

MySQL, Advanced Excel, Power BI, Tableau

- Extracted and analyzed airline route performance data via 20+ MySQL queries (joins, aggregations, filters), cleaning 10K+ records in Excel to achieve 98% data completeness for reporting.
- Designed Power BI and Tableau dashboards revealing on-time performance bottlenecks and load-factor trends, providing actionable insights that informed simulated route optimization recommendations.

EDUCATION

B.Tech — Computer Science & Engineering (Business Systems)

2021 – 2025

Rajeev Gandhi Memorial College of Engineering and Technology, Kurnool | CGPA: 7.2
